

Managed Hosting

Gage Networks is the selected partner and supplier of Cable&Wireless Worldwide Colocation Data Centre facilities, providing a resilient, secure environment for your mission critical servers.

The Cable&Wireless Worldwide Park Royal Data Centre incorporates state-of-the-art security, reliability and a resilient environment to house business critical equipment. The facility provides solutions for Finance, Government and business sectors with high reliance on providing services over the internet.

The Cable&Wireless Worldwide Park Royal Facility provides:

- 24 x 7 x 365 manned security
- Physical access strictly limited to authorised personnel
- Uninterruptable power supply (N+1 redundant)
- Redundant generator back up
- VESDA smoke detection
- Hi-fog zoned fire suppression systems
- 24-hour video coverage and recording
- Unique locks for every cage and cabinet
- Diverse fibre connections to the Cable&Wireless Worldwide global Internet
- Direct access onto a Cable&Wireless Worldwide PoP for connectivity
- Manned shipping bay
- Node rooms for termination of Telco circuits
- 24 x 7 x 365 on-site hands on support
- Customer breakout room

Housing your servers in regular office settings runs the serious and common risks of security threats, power outages and fire as well as requiring time and expertise to manage and monitor your environment 24 x 7 x 365.

Hosting within the Cable&Wireless Worldwide Data Centre provides an optimum base to build, deploy and manage your internet operations.

APC cabinet package:

- A secure and private lockable APC 42U cabinet
- 20 Amps drawable power – upgradable to 40 Amps
- Full power feed resiliency
- Managed APC power bars providing an extensive number of power ports
- Fully monitored power and temperature, cooling and ventilation systems with N+1 redundancy
- Remote Hands on via the customer Service Desk
- Remote access to perform reboots of individual power ports.
- Redundant and resilient dual Internet connectivity with up to 1000 Mbps bandwidth commitment.

What you need:

Resilient Environment

Your equipment will be supplied with power feeds connected to APC units then presented directly to your environment. These are fed from separate cabling and PDUs. The Cable&Wireless Worldwide facility has UPS battery backup, plus additional generator feeds and is on the emergency power list to provide the assurance of an uninterrupted power supply.

Disaster recovery Site

The data centre can act as a Disaster Recovery site to provide maximum protection if you already host your servers off-site. There can never be too much pro-active prevention associated in thinking about the outcome of losing connectivity to your organisations critical servers.

Dual Internet Connectivity

Gage Networks' fully managed Internet connectivity provides dual Ethernet connections direct to the Cable&Wireless Worldwide Internet backbone via a platform combining fully redundant switches, firewalls and power supplies.

Future Benefits

Park Royal is the base of colocation for many large enterprise level companies. Hosting within this data centre has significant economies as you will benefit from close proximity to several cutting edge technologies and services. The data centre can act as a central hub for all infrastructure connections.

Improved business efficiency

A managed colocation environment provides peace of mind for your organisation. By outsourcing network traffic to a colocation service provider with greater bandwidth capacity, web site access speeds improve considerably. Your business will benefit by not having to resource and manage environments on-site and will not need to invest in the infrastructure required for on site management of equipment.

What we provide:

We manage everything for you

Gage Networks takes pride in creating partnerships with its customers. The infrastructure we provide is complemented by a top quality service layer which incorporates:

- True, business critical UK based 24 x 7 x 365 Technical Customer Support Service Desk
- Customer Portal – The powerful interface provides customers with in-depth information on their services and a real-time dashboard containing information such as network bandwidth usage, temperature within your environment and much more.
- Experienced Project Management for installations
- Dedicated Account Manager
- Regular Service Reviews – a face to face meeting for both parties to give feedback over a certain service period.

We monitor your equipment environment

Our Technical Engineering Team monitor your data centre temperature, bandwidth and power. This ensures for pro-active prevention which makes our fault resolution invaluable. Management and monitoring is also available to our customers through our dedicated Customer Portal.

Why Gage Networks?

We are hosting specialists with extensive industry knowledge. We partner with only industry leading providers and are Cable&Wireless Worldwide's single hosting partner.

We work with your expectations and time scales - all aspects of your solution are fully project managed, supported and managed by Gage Networks.
