

IP Phone Portfolio

The phones used in a business are the visible part of the Gage Networks IP Telephony platform. Gage Networks has selected to provide exclusively Polycom® SoundPoint® IP Phones across all deployments, the most highly regarded and completely standards based SIP compliant phones.

The modern functional design of the Polycom IP Phone range will project a professional image across the business. Every phone in a business will work in the same way and have the same set of core features wherever the phone is located, a colleague's cubicle, the manager's office or the boardroom in New York.

All phones include:

Support for High Definition (HD) Voice

For the ultimate in speech clarity, HD Voice brings life like richness to every call on all audio paths, handset, hands free speaker-phone and optional headset.

Class leading full duplex hands-free speaker phone

For easy hands free operation.

Embedded Power over Ethernet (PoE) as standard

One cable for data connection and power, for a clutter free desk. Standard power adaptors also available.

Switched 10/100Mbit Ethernet ports

Single Ethernet cable per desk to support attached computer.

Support for 3 way ad-hoc conference calls

Easier collaboration for more productive working.

A standard RJ-9 headset port

The same headset will work across all phones.

Back-lit graphical display

Easy to see and use in low light conditions.

The IP Telephony Platform supports a number of extended features with advanced IP Phones:

Phone directory with unlimited number of entries

Corporate directory on the phone via a managed directory.
Contact directory for personal contacts.

Call quality monitoring

Embedded on every IP Phone to enable centralised monitoring of call quality.

Conference calls visually managed

Put individual calls on hold and on mute using the soft keys and phone display.
